

## HOME MADE HUMMINGBIRD NECTAR

Hummingbirds love nectar and you can make your own recipe right from home. It's important to remember to only use cane or beet sugar. Hummingbirds systems cannot digest other sugars coming from molasses, brown sugar or artificial sweeteners. Never add dyes or food coloring. It is important to use purified water. Keep feeders cleaned at least once a week to keep it free from bacteria, particularly in hot temperatures.

Combine one part (cup) plain white table sugar and four parts (cups) water.

Slowly heat the solution for 1-2 minutes to help the sugar dissolve and slow fermentation.

Allow the solution to cool completely before filling feeders.
